ИЗВОД ИЗ СТУДИЈЕ ЗАШТИТЕ ПАРКА ПРИРОДЕ „РАДАН”

У складу са чл. 42 став 9. Закона о заштити природе („Службени гласник РС”, бр. 36/09, 88/10, 91/10-исправка, 14/16, 95/18-др. закон и 71/21), Министарство заштите животне средине објављује извод из студије заштите на основу којег ће заинтересована јавност моћи да идентификује у простору дефинисане границе и режиме заштите подручја I (прве) категорије, Парка природе „Радан”.

Простор природног добра „Радан” представља брдско-планинско подручје централног дела јужне Србије. Налази се између горњих токова реке Косанице и Јабланице. Средишни део простора испуњава планински масив Радана по коме је читаво подручје природног добра носи назив „Радан”. Основна карактеристика планине Радан је велика разуђеност масива, са главним правцем пружања север-југ. Централни део Радана је у изворишту Пусте реке, Мале и Велике Лопарде и Шапота. Највиши врх на масиву је Шапот (1409 m н.в.). Са ових висова се спуштају падине различитих експозиција и нагиба са увалама и дубоким јаругама, али се и одламају комади андезитских стена, који формирају покретне и непокретне сипаре видљиве на целој планини до самог подножја.

Подручје природног добра „Радан” обухвата горње делове сливова Топлице, Пусте реке и Јабланице. У средишњем делу се налази планински масив Радан. Шири предео Радана и његове околине је под утицајем субмедитерана. Клима је умерено континентална са топлим и сувим летима, високим средњим месечним температурама и релативно благим зимама. Отвореност подручја према долинама Јабланице и јужне Мораве, омогућила је струјање ваздуха са југа. Шири предео Радана са запада обухвата Соколов вис (1370 m), Равну планину (1126 m) и Мајдан планину (1052 m). Већина осталих висова су од 600 до 1000 m н.в., тако да се ради о средњевисоком брдско-планинском терену. Геолошку подлогу чине претежно андезити и дацити. Источна страна Радана представља рефугијум специфичне орографске разуђености амфитеатралног облика. Амфитеатар се налази у једном облику, који га штити са севера и запада. Заклоњеност читавог предела, топла и сува клима јужне Србије, отвореност читавог терена према лесковачкој котлини, андезитска подлога, дисециран рељеф и богата хидрографска мрежа речица и потока, омогућили су појаву и распрострањење реликтних полидоминантних шумских заједница са мечјом леском (*Corylus colurna* L.) и кавкавском липом (*Tillia caucasica* Rupr.) и мешовитих храстових заједница са јаворима и веома развијеним појасом букових шума.

Рељеф природног добра „Радан” припада планинско-котлинској области Србије. У њему постоје разноврсни облици рељефа изграђени од стена, старости од прекамбријума до квартара. Велики облици рељефа, планине и мање котлине међу њима створени су радом унутрашњих сила у старијим геолошким периодима. Током неогена и квартара спољашне силе су изградиле своје облике међу којима преовлађују облици речне ерозије и акумулације. Земљишта на Радану су углавном образована у зони Лецког андезитског масива и који је од највећих вулканских комплекса у нашој земљи. У генетско-еволутивном смислу у овој зони се налазе све развојне фазе земљишта на андезитима.

Шире подручје на коме се налази Радан планина омеђено је рекама Топлицом на северу, Јабланицом на југу и Косаницом на западу. На истоку обронци Радан планине преко побрђа постепено прелазе у Лесковачку котлину. Највиши врх Радана је Шопот (1.408 m). Геолошку подлогу чине еруптивне и метаморфне стене вулканског порекла, представљене тзв. Лецким андезитским масивом. У педолошкој основи доминира неутрално смеђе земљиште на андезиту (ранкери). Према Валтеровој класификацији климе (Walter, 1964) подручје Радана припада прелазном субмедитеранско егејско-субконтиненталном климатском типу. Лесковачка котлина, која се наслања на Радан позната је као најаридније подручје у Србији, са просечном годишњом количином падавина од 529-587 mm воденог талога (Ракићевић, 1980). Јабланица је, са своје стране, позната као највећа сушица у Србији.

У оваквим еколошким условима на Радану егзистира добро развијен биљни покривач. Основ вегетације чине шумске заједнице типа *Fagetum montanum moesiacum* и *Quercetum frainetto-cerriss*, док су на појединим локалитетима присутне и реликтне заједнице *Corylo colurnae-Fagetum* и *Aceri-Tilietum caucasiae sillicicolum*. У њима су присутне и бројне ливадске заједнице брдско-планинског типа.

Релативно мала надморска висина утицала је да потенцијална вегетација целог овог подручја буде шумска. У долинама Косанице и Пусте реке потенцијална вегетација је шума врбе и тополе (*Salici-Populetum albae*) уз сами ток, а на нешто вишем платоу на Соколовици и Радану потенцијалну вегетацију чине два вертикална вегетацијска појаса; на нижим надморским висинама (300-700 m) потенцијално се развија појас климазоналне шуме *Quercetum farnetto-cerris*, а изнад 700 m букова шума (*Fagetum montanum moesiacum*). У контактном делу између храстовог и буковог појаса у дијапазону надморских висина између 850-1000 m, на реликтним стаништима, на серији земљишта на андезиту, распрострањене су реликтне полидоминантне и осиромашене шумске заједнице са мечјом леском (*Corylus colurna* L.) и кавкаском липом (*Tilia caucasica* Rupr.). На термофилним стаништима између ова два вегетацијска појаса развијен је један подпојас шумске вегетације у коме је диференцијална врста храст китњак и представљен асоцијацијом *Quercetum montanum moesiacum*.

На простору заштићеног природног добра присутно је 28 различитих биљних заједница. Специфична станишта на сипарима од крупних комада андезитских стена, и велико флористичко богатство реликтних шума у којима се у једној састојини налази преко 10 врста дрвећа, са буковим шумама представља целовити рефугијум. Зељаста вегетација планине Радан је такође разноврсна и флористички богата. Посебно место заузимају брдско-планинске ливаде кошанице (делимично пашњаци) које су на овом подручју још увек очуване.

Флора подручја Радана броји 751 биљних врста из 91 фамилија и 369 родова, што представља око 10% флоре Балканског полуострва и око 22% флоре Србије. Од укупног броја биљних врста, колико је до сада забележено у флори Радана, 26 се могу подвести под неку категорију угрожености. Од свих угрожених таксона највећи значај, има хибрид између врста *Sempervivum zeleborii* и *Jovibarba heuffelii* и ендемична врста *Sedum stefco*. На подручју Радана највећи број ендемита и субендемита припада средњеевропском ареал-типу, и то мезијски ендемити, који су представљени са 4 врсте: *Pulsatilla montana* ssp. *bulgarica*, *Pastinaca hirsuta*, *Armeria rumelica* и *Sedum stefco*.

Од присутних врста риба на простору Радана од значаја су поточна пастрмка (*Salmo trutta*), двопругаста уклија (*Alburnoides bipunctatus*), поточна мрена (*Barbus balcanicus*), кркуша (*Gobio gobio*), клен (*Leuciscus cephalus*), вијун (*Cobitis taenia*) и гргеч (*Perca fluviatilis*).

Подручје Радана одликује релативно великим богатством птица од 107 врста или око 30% од укупног броја врста птица Србије. Посебан значај је у присуству веома ретких или угрожених врста врста птица гнездарица које су од међународног и националног значаја заштите. Забележено је 97 врста гнездарица (станарица и селица) или 40% гнездарица Србије, као што су нпр. црна рода (*Ciconia nigra*), орао kликташ (*Aquila pomarina*), сури орао (*Aquila chrysaetos*), патуљасти орао (*Hieraaetus pennatus*), сиви соко (*Falco peregrinus*), прдавац (*Crex crex*), буљина (*Bubo bubo*), легањ (*Caprimulgus europaeus*), црвеноглави сврачак (*Lanius senator*) и др.

Фауна сисара има све карактеристике типичне фауне европских листопадних, мешовитих и четинарских шума, чини је најмање 45 врста углавном везане за различите типове шумских станишта. Такође, карактеристично је то да на специфичним staништима степског типа, се јављају и неки типични степски фаунистички елементи (зец, пољска волухарица, слепо куче, ласица). Посебно је значајан налаз ендемичне врсте – македонске волухарице (*Microtus felteni*) и шареног твора (*Vormela peregusna*).

На ширем простору Радана налазе се више десетина објеката споменичког наслеђа који су специфични по времену настанка, степену очуваности и уметничким вредностима. Међу овим објектима Царичин град, Дренград и Кастрат представљају објекте изузетног значаја у европским размерама.

Имајући у виду овако дефинисан простор, постојеће стање на терену, циљеве заштите и постојећу законску регулативу, оцењено је да подручје Радана испуњава све неопходне услове за заштиту као Парк природе „Радан”.

Укупна површина заштићеног подручја износи 43.512,72 ha.

Према подацима Републичког геодетског завода у државном власништву се налази 18.683,77 ha (42,94%) површине заштићеног подручја. У приватном власништву је 24.816,47 ha (57,03%) и у црквеном 12,49 ha (0,03%).

ПРЕДЛОЖЕНИ РЕЖИМИ ЗАШТИТЕ

На подручју Парка природе „Радан” издвојене су посебне просторне целине са режимима заштите I (првог), II (другог) и III (трећег) степена, у складу са природним и створеним вредностима, антропогеним утицајима, потребним мерама за спровођење заштите и очувања, као и могућностима коришћења и развоја.

Укупна површина свих локалитета у режиму заштите I степена износи 991,25 ha, што представља 2,28% укупно заштићене површине (43.512,72 ha). У режиму заштите I степена налазе се следећи локалитети:

1. „Пролом”;
2. „Рипиводе”;
3. „Петровац”.

Режимом заштите I степена обухваћена су објекти гео диверзитета, станишта природних реткости биљних и животињских врста, као и специфичне биљне заједнице које представљају значајан елемент основних вредности заштићеног простора, осетљиви екосистеми.

На површинама на којима је утврђен режим заштите I степена на основу Закона о заштити природе („Службени гласник РС“, бр. 36/2009, 88/2010, 91/2010, 14/2016, 95/2018-др.закон и 71/2021) **забрањује се**:

- коришћење природних ресурса;
- и искључују сви други облици коришћења простора и активности;
- изградња објеката и извођење било каквих радова и активности.

Радови и активности **ограничавају се** на:

- научна истраживања и праћење природних процеса;
- контролисану посету у образовне, рекреативне и општекултурне сврхе;
- обележавање границе;
- спровођење заштитних, санационих и других неопходних мера у случају пожара, природних непогода, удеса, појава биљних и животињских болести и пренамножавања штеточина, уз сагласност Министарства;
- одржавање постојећих објеката као што су високонапонски далеководи, постојећих шумских путева.

Укупна површина свих локалитета у режиму заштите II степена износи 6.250,99 ha, што представља 14,37% укупно заштићене површине (43.512,72 ha). У режиму заштите II степена налазе се следећи локалитети:

1. „Рударе-Девојачки крш“
2. „Соколовица“
3. „Радан“
4. „Горњи Гајтан“
5. „Петрова Гора-Деливода-Гајтанска врата-Боринска река“
6. „Брестовачко језеро“
7. „Свињиште“
8. „Заграђе“.

На овом подручју **забрањује се**:

- извођење радова који могу довести до оштећења објеката геонаслеђа;
- експлоатација минералних сировина;
- слободно испуштање отпадних и загађујућих вода у водотоке;
- промена намене водног земљишта;
- уништавање влажна станишта, као и извођење активности којима се она исушују;
- паљење ватре, осим на местима одређеним за ту намену;
- уништавање и сакупљање биљних и животињских врста које су обухваћене правилником којим се прописује проглашење и заштита строго заштићених и заштићених дивљих врста биљака, животиња и гљива, односно врста које се наводе у „црвеним књигама” и „црвеним листама” флоре и фауне;
- чиста сеча шума која није планирана као редован вид обнављања шума, осим у случајевима прописаним законом;
- постављање табли и других обавештења на стаблима;
- употреба свих недозвољених средстава за лов рибе (нпр. креч, хлор, конопља, експлозив, струја, мреже и др.);
- узнемиравање птица и других животиња у репродуктивном периоду;
- уништавање гнезда птица;
- изградња стамбених и викенд објеката осим стамбених и помоћних објеката у оквиру постојећих пољопривредних домаћинстава и грађевинских парцела;
- превођење вода и измену хидродинамичких карактеристика и режима потока и река, као и све друге радове и интервенције које могу негативно утицати на измену хидролошког режима подземних и површинских вода.
- преоравање природних ливада и пашњака;
- формирање хранилишта на заштићеном подручју;
- изградња септичких јама пропусног типа и свако испуштање отпадних и осочних вода у водотокове и земљиште;

- обављање било каквих радова на непокретном културном добру и у његовој непосредној околини без претходно прибављених услова и сагласности надлежне службе за заштиту споменика културе и природе.

Радови и активности **ограничавају се** на:

- активности на извођењу хитних и неопходних санационих шумских радова након акцидентних ситуација приликом ветролома, ветроизвала, пожара, каламитета инсеката и слично;
- спровођење одговарајућих мера противпожарне и против ерозионе заштите;
- газдовање шумама и шумским земљиштима у складу са плановима и основама газдовања шумама, а којима се обезбеђује одржавање постојећих шумских екосистема, умерено повећање површина под шумским екосистемима и побољшање њиховог састава, структуре и здравственог стања, очување разноврсности и изворности дрвећа, жбуња и осталих биљних и животињских врста у шумским састојинама;
- активности везане за унапређење популација ретких и угрожених биљних и животињских врста;
- контролисано сакупљање лековитог биља;
- сакупљање гљива, дивље флоре и фауне;
- праћење стања флоре и фауне;
- спровођење активности у оквиру научноистраживачких радова и праћење природних процеса;
- ловство на санитарни лов дивљачи, заштиту и унапређивање популација дивљачи у ловишту и мере на унапређивању станишта дивљачи, у складу са планским актима из области ловства;
- испашу стоке;
- кошење ливада и коришћење траве;
- постављање наменских кућица за гнежђење птица на одређеним локацијама, уз редовно одржавање и мониторинг;
- предузимање мера и активности заштите акватичних екосистема од свих видова загађења, промена хидролошког режима и квалитета воде и деградације станишта;
- сакупљање и транспорт неопасног отпада;
- изградња водозахвата или дубоких бушотина издвојених за потребе појединачних домаћинстава и насеља;
- изградња водозахвата за потребе водснабдевања насеља;
- изградњу мањих објеката за презентацију природних и традиционалних вредности у складу са потребама екотуризма;
- доградња и реконструкција економских објеката у функцији пољопривредне производње, као и за потребе пољопривредних газдинстава;
- изградња објеката за конвенционално гајење домаћих животиња и дивљачи;
- изградња, ревитализација и одржавање нових јавних путева, предвиђених важећом просторно планском документацијом;
- изградња, реконструкција и одржавање/санација шумских путева предвиђених плановима и основама газдовања шумама;
- изградња и уређење пешачких, планинарских и бициклистичких стаза;
- одржавање манифестација;
- предузимање мера и активности заштите фауне риба (утврђен ловостај у периоду мреста, спашавање риба и транслокације, строго придржавање режима риболов и прописаног начина риболова, алати и средстава, формирање ревира по принципу „ухвати и пусти“, планско порибљавање у погледу

количина, врста и узрасних категорија, без уношења страних/алохтоних врста риба, јачање рибочуварске службе.

Подручје под режимом заштите III степена заузима укупну површину од 36.270,48 ha (83,35%) и обухвата територију Парка природе „Радан“ која није под режимом заштите I и II степена. На овом подручју **забрањује се** и:

- експлоатација минералних сировина, земље и речних наноса, осим оних који се на основу прописане процедуре већ стекли право, и отварања привремених површинских копова искључиво за потребу изградње и одржавања противпожарних и шумских путева као и одржавање сеоских путева;
- уништавање и сакупљање заштићених и строго заштићених биљних и животињских врста;
- изградња стамбених, економских и помоћних објеката пољопривредних домаћинстава и викенд објеката изван грађевинских подручја утврђених посебним планским и урбанистичким документима, односно градња објеката пољопривредних домаћинстава изван постојећих грађевинских парцела до доношења тих докумената;
- преоравање земљишта, крчење и сеча шума и обављање других радњи на местима и на начин који могу изазвати процесе водне ерозије;
- одлагање и бацање смећа и отпадних материјала изван места одређених за ту намену;
- порибљавање које није у складу са програмом управљања рибарским подручјем;
- рекреативни риболов током целе године у времену од 21,00 до 3,00 часа у периоду летњег рачунања времена, а од 18,00 до 5,00 часова у периоду зимског рачунања времена (осим ако корисник рибарског подручја другачије не одреди);
- све радње и активности којима се угрожава фауна риба и ремети њихов мрест, раст, исхрана и кретање;
- све радње и активности којима се мења квалитет и квантитет воде у водотоцима;
- руковање отровним хемијским материјама и нафтним дериватима на начин који може проузроковати загађивање земљишта и вода;
- изградња објеката или извођење других радова којима се угрожава непосредно окружење непокретних културних добара и добара под претходном заштитом, односно, који нису у функцији заштите, уређења и презентације комплекса;
- обављање било каквих радова на непокретном културном добру и у његовој непосредној околини без претходно прибављених услова и сагласности надлежне службе за заштиту споменика културе и природе.

Радови и активности **ограничавају се** на:

- сакупљање заштићених дивљих биљних и животињских врста и гљива које су под контролом коришћења и промета;
- одржавање оптималне бројности и здравственог стања популација ловних врста;
- заштиту, управљање, лов, коришћење популација дивљачи у ловишту, очување и предузимању мера на унапређењу станишта дивљачи, као и на заштиту, уређивање и одржавање ловишта;
- заштиту сливних подручја бујичних водотокова применом техничких, биотехничких и биолошких мера у складу са режимом заштите;
- вршење експлоатације минералних сировина;

- чишћење корита водотокова од вегетације и наноса у циљу очувања пропусне моћи, а по потреби и продубљивање корита (само тамо где је то неопходно, због спречавања могућих поплава), по претходно прибављеним условима заштите природе;
- истраживање до сада недовољно проучених локалитета на начин и под условима заштите природе;
- појединачни дневни улов са циљем развоја рекреационог риболова чиме се чува рибљи фонд од превеликог и неравномерног притиска;
- каптирање извора, изградња водозахвата, дубоких бушотина или издвојених објеката за потребе водоснабдевања појединачних домаћинстава;
- неконтролисана примена хемијских препарата у конвенционалној пољопривредној производњи;
- реинтродукцију и реколонизацију аутохтоних врста и друге активности на очувању и унапређивању стања популација угрожених дивљих врста флоре и фауне;
- уређење и коришћење простора у складу са прописаним режимом заштите на начин којим се омогућава очување природних вредности и споменика културе;
- уређење, изградња и инфраструктурно опремање простора за потребе туризма и рекреације;
- научноистраживачки и образовни рад и презентација природних и културних вредности Парка природе;
- очување и унапређивање културно-историјског наслеђа;
- развој и популаризацију етнолошког наслеђа и других културно-историјских вредности;
- уређивање подручја и изградњу објеката на начин и под условима који не нарушавају културно-историјске вредности;
- уређење и презентацију створених вредности подручја под стручним надзором завода за заштиту споменика културе и заштите природе;
- сечу и уклањање дрвећа, жбуња и остале вегетације у сврхе археолошких ископавања материјалних остатака на локалитету уз претходно прибављене услове заштите природе у складу са Законом о заштити природе;
- истраживачке радове и уређење са минималном употребом механизације ради не нарушавања амбијенталних вредности културно-историјских локалитета и
- уношење нових садржаја: објеката, пешачке стазе, информативне табле и др. само на начин и уколико они доприносе заштити, односно презентацији комплекса, уз услове и сагласност надлежне службе заштите.
